MONTHLY WHOLESALE TRADE: SALES AND INVENTORIES MAY 2001

Sales. May 2001 sales of merchant wholesalers, after adjustment for seasonal variations and trading-day differences but not for price changes, were \$229.8 billion, down 0.1 percent (+/-0.7%) from the revised April level, but were 0.1 percent (+/-1.5%) above the May 2000 level. The April preliminary estimate was revised downward \$0.3 billion or 0.1 percent. Among durable goods, sales of metals and minerals, except petroleum increased 3.7 percent from last month, while electrical goods decreased 3.1 percent. Among nondurable goods, sales of petroleum and petroleum products were up 1.7 percent and drugs and druggists' sundries grew 1.4 percent.

Inventories. Total inventories of merchant wholesalers, after adjustment for seasonal variations but not for price changes, were \$302.6 billion at the end of May, up 0.2 percent (+/-0.4%) from last month, and were 2.3 percent (+/-2.5%) above a year ago. The April preliminary estimate was revised downward \$0.6 billion or 0.2 percent. End-of-month

inventories of durable goods decreased 0.9 percent (+/-0.6%) from last month, and were 1.0 percent (+/-2.3%) below May 2000. Compared to last month, inventories of electrical goods decreased 3.2 percent and motor vehicle and motor vechicle parts and supplies fell 1.9 percent. End-of-month inventories of nondurable goods increased 2.0 percent (+/-0.7%) from April 2001, and were up 8.4 percent (+/-4.9%) from last year. Inventories of drugs and druggists' sundries increased 4.3 percent from last month, and farm product raw materials increased 2.4 percent.

Inventories/Sales Ratio. The May inventories/sales ratio for merchant wholesalers, based on seasonally adjusted data, was 1.32. The May 2000 ratio was 1.29.

Data in this report are based on a sample and, therefore, are subject to sampling and nonsampling variability. A discussion of the reliability of the data and general survey methodology appears in BW/00-A Current Business Reports.

Note: Medians are based on data from the period January 2001 to present.

Reliability of Estimates

There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling.

Sampling errors occur because observations are made on a sample, not on the entire population, and different samples could have led to different estimates. Standard errors and coefficients of variation, as calculated for this report, are measures of sampling variation. The margin of sampling error, as used on page 1, gives a range about the estimate which is a 90% confidence interval. If, for example, the trend estimate is up 1.2% and the standard error is 0.9%, then the margin of sampling error is $\pm 1.65 \times 0.9\%$ or $\pm 1.5\%$, and the 90% confidence interval is $\pm 1.65 \times 0.9\%$ or $\pm 1.5\%$, and the estimate ontains 0, it is uncertain whether there was an increase or decrease. For monthly level, the coefficient of variation (CV) is given. The resulting confidence interval is the estimated value $\pm 1.65 \times CV \times (the estimated value)$.

Nonsampling errors can occur because of nonresponse, insufficient coverage of the universe of wholesale businesses, mistakes in the recording and coding of data, and response errors. Imputed data accounts for approximately 28% of the sales estimates and 31% of the inventories estimates. Additionally, estimates of sales and inventories prior to March 2001 have been restated from SIC-based estimates. The restatement methodology may have introduced additional nonsampling error. The calculated median standard errors of year-to-year change estimates may also be influenced by the methodology used to impute historical data for units in the NAICS sample. The effect of this historic imputation methodology on published estimates will decrease as more data from the NAICS sample is accumulated. Precautionary steps are taken to minimize nonsampling errors, but their magnitude is not directly measured.

1 Adjusted sales and inventories data shown in Table 1 are obtained by dividing the unadjusted data by the adjustment factors shown above for the corresponding group. Adjusted data for the totals are obtained by adding the durable and nondurable goods. Seasonal factors shown for the totals will provide an approximation of the adjusted estimates, but may show small differences from the published data.

Note: The seasonal factors shown have been computed based on monthly estimates through the current month preliminary estimates.
